

MAKING SENSE OF STEM CELLS

Public meeting – open to all

8.00 - 9.30pm

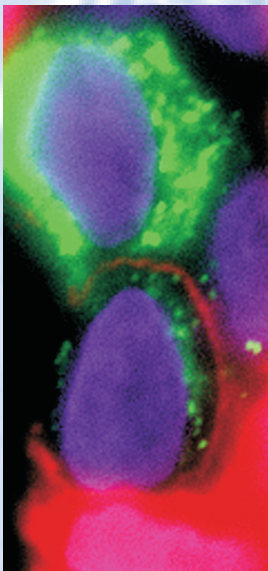

Tuesday 20th September 2005

Bratsera Hotel, Hydra Town

Stem cells hit the headlines every week. They're the celebrities of the cell world.

They also have the potential to impact our understanding and treatment of some of today's most complex diseases, like diabetes and Parkinson's.

Come along to an open public meeting at the Bratsera Hotel to find out more about the science behind the headlines, from three scientists working at the cutting edge of stem cell research:

Professor Austin Smith

MRC Centre Development in Stem Cell Research, University of Edinburgh

· *Embryonic stem cells - what's all the fuss about?*

Professor Danny Pipeleers

JDRF Center for Beta Cell Therapy in Diabetes, Brussels Free University

· *Stem cells for treatment of diabetes*

Professor Anders Björklund

Wallenberg Neurosciences Center, Lund University

· *Stem cells and neurodegenerative diseases*

Bring your questions – the meeting will conclude with an open question and answer session.

Refreshments served from 7.30pm
